# Producing Images and Movies in Chimera

An introduction to several useful tools for creating publication-quality images and movies
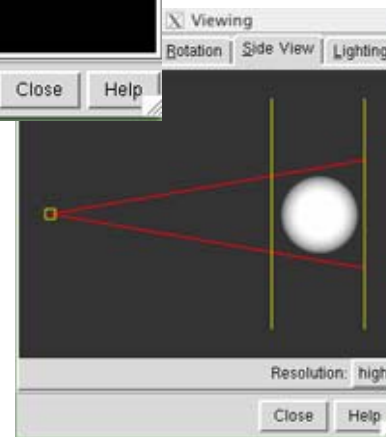

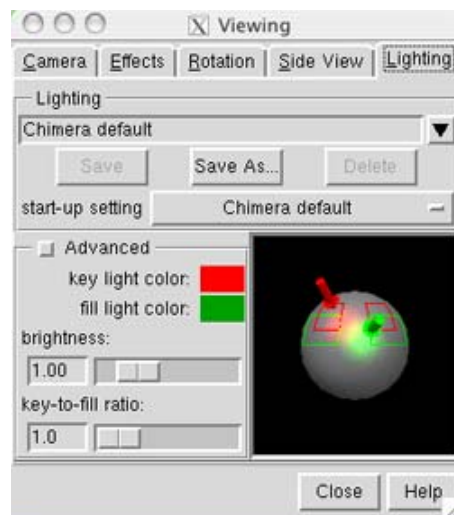

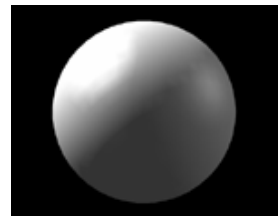

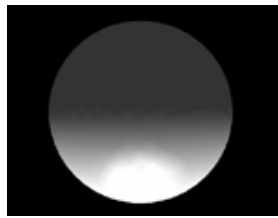

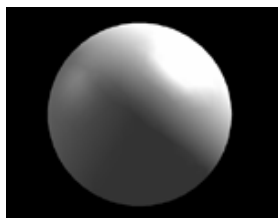

Nucleotides

The **Nucleotides** tool can be used to obtain highly stylized renditions of nucleotide structures

Visual Effects

Several utilities enable you to control the visual components of a molecular scene

Publication-Quality Images

Support for multiple image formats, antialiasing, high-resolution images

Image Annotation

Add annotations in the graphics window using the **2D Labels** tool; label color and size are configurable

Capture Movies from the Graphics Window

The **Movie Recorder** tool enables you to make a movie from the contents of the graphics window; supports encoding in popular video formats
